The invention discloses a polynuclectide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynuclectide or its partial peptide, immunologically assaying the polypeptide or peptide of the polynuclectide, immunologically assaying the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two a transformant carrying the polynuclectide in an expressible manner and an antisense polynuclectide. The oligonuclectide is useful as a primer for synthesising the polynuclectide, or as a probe for detecting the polynuclectide. The oligonuclectide is useful as paramaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related configuration. The genes are involved in tissue and of genes medicines for regulation of their expression and activity, or as targets of gene may be included in them, for develophing a diagnostic marker or medicines for regulated proteins, disease-related proteins, disease-related proteins and genes concoming them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tunours. The cDNA may be used to regulate the activity or expression of the encoded proteins and genes are involved and the proteins and genes are involved and the sequence the activity or expression of the encoded proteins and genes requence presented is a cDNA of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. 660 480 540 596 900 656 300 420 476 536 116 180 117 cecacaccaccaccaccatcarcarcaccardeccadaragearageagacagagagaga 176 CAAGCTCCTAAACCAATCACACCCCTACTTCACACCAGAAAGCTCAGAGTGCCCCAAAG 240 recedencecedentes de la contra del la contra della contra 360 9 GAGGAGAGGCCCGAGCAGGATGGAGTGCAGGTGGCTGTGGTCAGGATCAAGGGCCCCTTG GGGCAGCCAGAGAATGACATTGACAGAATCCTCCACAGCCACGGCTCCCCAACGCGGAGG 537 Agadalgreccaaccregrerereneaccaaccaaeecreeacaaeacaaeae GAGCCCACATGGAGGAGTGACAGCGTAGACACAGAGGACAGCGGCTATGGAGGAGGAGCCT GGAGGGGACGTGAGCCTCAGCCACAGGTACGAGAGGGATGCTGGTGTGCTTGAACCT AGAAAATGTGCCCAACCTGGTGTCTGAGCTAACCAAGGGCTGGAGAGTGATGGAGCAGGAG GAGCCCACATGGAGGAGTGACAGCGTAGACACAGAGGACAGCGGCTATGGAGGAGAGGCT CAAGCTCCTAAACCAATCACACCCCCTACTTCACACACAGAAGCTCAGAGAGTGCCCCAAAG GTTTCTCACATCAAAAAAAAAAGAGGTGTCCAAAAACGGTGGTCAGCAAGACTTACGAGAGA 1 ATGGCTCCGGGCGAAAAGGAAAGCGGGGAGGGCCCAGCCAAGAGCGCCCTCCGGAAGATA CGCACCACCCACCCTGGTCATCAGCTTGGCCCGAGGTTGGCAGCAGTGGGCGAATGAGAAC TCGCCACCCCGCCTGCCAGAAGGACATGGAGATGGACAAAGCTCAGAGAAAGCCCCTGAG Gaps 99.9%; Score 1144.4; DB 9; Length 1322; 99.9%; Pred. ```
The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recardion (PGN) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of polypeptide and polymucleotide sequences have applications in dispussing conditions and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_esempears.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CCAACGCGGAGGAAAATGTGCCAACCTGGTGTCTGAGCTAACCAAGGGCTGGAGAGTG 178
                                                                                                                                                                                                                                                                                                                                        The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs and be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithehial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human forcal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               288
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  408
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    468
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                418

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probes may be used for present sequence is one such probes may be used for predicting, measuring and displaying gene expression in samples derived probes are useful for predicting, diagnosing, grading, staging, probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pcr_sequences
                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                        478

```
probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      537 CAGGACTCACCTCAAGCTCCTAAACCAATCACACCCCTACTTCACAGCACACGCAGAAAGCTCAG 478

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  228

The invention relates to a single exon nucleic acid probe (SENP) (1) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABS25011-ABS51005 represent human liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                185 TIGACAGAATCCICCACAGCCACGGCTCCCCAACGCGGGGGGAGAAATGTGCCAACCTGG 126
                                                                                                                                                                                                                                                                                                                                           The present invention relates to human single exon nucleic acid probes (SSRP). The present sequence is one such probe. The SSRPs are derived from human Hela cells. The SBNPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; foetal liver; gene expression; single exon nucleic acid probe; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12 TGTCTGAGCTAACCAAGGGCTGGAGAGTGATGGAGGAGGAGGAGGCCCACATGGAGGAGTG 66
                                                                                            Probe #24524 used to measure gene expression in human placenta sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          500 TGTCTGAGCTAACCAAGGCCTGGAGAGTGATGGAGCAGGAGCCCCACATGGAGGAGTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmiss and congenital heart disease. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       319
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          365 AAGGACATGGAGATGGACAAAGCTCAGAAAGCCCCTGAGGTTTCTCACATCAAAAGA 306
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                320 AAGAGGTGTCCAAAACGGTGGTCAGCAAGACTTACGAGAGGAGGAGGGGACGTGAGCCACC 379
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TCAGCCCACAGGTACCAGAGGGATGCTGGTGCTTGAACCTGGGCAGCAGAATGACA 439
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Single exon nucleic acid probes for analyzing gene expression in human

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   genome-derived single exon nucleic acid probes useful for analyzing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system

-!- FUNCTION: Sequence-selective DNA-binding protein (By similarity).
-!- SUMCELLULAR LOCATION: Nuclear (By similarity).
-!- SIMILARITY: Belongs to the SNP2/RAD54 helicase family.
-!- SIMILARITY: Contains 2 chromo domains. GO; GO:0004003; F:ATP dependent DNA helicase activity; TAS.

FUNCTION: B3 Ubfquitin-protein ligase which accepts ubfquitin from an. E2 ubfquitin-conjugating enzyme in the form of a thioester and then directly transfers the ubfquitin to targeted substrates (By similarity): Daylor theracce with UBESD2 (By similarity). Binds SCNNIA,

MAPI LIGHT CHAIN LC2. LYS-RICH (BASIC). 9 X 3 AA REPEATS OF K-K-[DE]

9. F -> L (IN REF. 1). VV -> IP (IN REF. 4)

Fukuyama R., Rapoport S.I.;

"Brain-specific expression of human microtubule-associated protein 1A
"Brain-specific expression of human chromosome 15.";

(MAPIA) gene and its assignment to human chromosome 15.";

J. Neurosci. Res. 40:820-825(1995).

- PTUNCINCH structural protein involved in the filamentus crossbridging between microtubules and other skeletal elements.

- SUBUNIT: 3 different light chains, LCI, LC2 and LC3, can associate
with MAPIA and MAPIB proteins.

- DOMAIN: THe basic region containing the repeats may be responsible
containing of MAPIA to microtubules.

- DOMAIN: THE basic region containing the repeats may be responsible
containing of MAPIA to microtubules.

- FTM: Uarious serine residues may be phosphorylated by CAMP kinase.

- FTM: LC2 IS COEXPRESSED WITH MAPIA. IT IS A POLYPEPTIDE GENERATED
FROM MAPIA BY PROTEDLYTIC PROCESSING. IT IS FREE TO ASSOCIATE WITH
BOTH MAPIA AND MAPIB. This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the BMIL outstation the Buropean Bioinformatics Institute. There are tractions on its use by non-profit institutions as long as its content is in no way modified and this scatement is not removed. BISBASS: HR MUTATION PRODUCES A NUMBER OF PLEIOTROPIC BFFECTS
INCLUDING STRUCTURAL ABNORMALITIES OF EPITHELIAL CELLS IN THE HAIR
FOLLICLES, HAIR LOSS TOWARDS THE END OF THE FIRST HAIR GROWTH
CYCLE, AND THE FAILURE OF SUBSEQUENT HAIR GROWTH CYCLES, OLDER
MICE CARRYING AN IR MUTATION HAVE BEEN REPORTED TO POSSESS ALTERED
RATIOS OF T-CELL-DEPENDENT B-CELL RESPONSES. MICE HOMOSYGOUG FOR
HR MUTATION ARE UNIQUELY SENSITIVE TO UV AND CHEMICALLY INDUCED
                                                                                                                                                                                                                                                                                                 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

            "Isolation of a novel histone deacetylase reveals that class I and class II deacetylases promote SMRT-mediated repression.";
"Isolation of a novel histone deacetylase reveals that class I and class II deacetylases promote SMRT-mediated repression.";
Genes Dev. 14:55-66(2000).
-I- FUNCTION: Mediates the transcriptional repression activity of some nuclear receptors by promoting chromatin condensation, thus preventing access of the basal transcription.
-I- SUBUNIT: Forms a large corepressor complex that contains SIN3A/B and histone deacetylases HDA(1 and HDAC2. This complex associates with the thyroid (TR) and the retinoid acid receptors (RAR) in the which the thyroid (TR) and the retinoid acid receptors (RAR) in the absence of ligand, and may stabilize their interaction with TFIBB. Interacts with HDAC10 and MINT (By similarity). Interacts with
                                                                                                                                                                                                                                                                                                                                                                                                                                DOMAIN: The N-terminal region contains repression functions that are divided into three independent repression domains (RDI, RD2 and RD3). The C-terminal region contains the nuclear receptor—interacting domains that are divided in two separate interaction domains (IDI and ID2).

DOMAIN: The two interaction domains (ID) contain a conserved sequence referred to as the CORNR box. This motif is required and sufficient to permit binding to unliganded IR and RARS. Sequences flanking the CORNR box determine nuclear hormone receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY)

MEDLINE=96184581; PubMed=8603705;

Strub J.M., Hubert P., Nullane G., Aunis D., Metz-Boutigue M.-H.;

Antibacterial activity of secretolytin, a chromogranin B-derived peptide (614-626), is correlated with peptide structure.";

FEBS Lett. 379:273-278(1996).

-I-FUNCTION: Secretogranin I is a neuroendocrine secretory granule protein, which may be the precursor for other biologically active peptides. The 16 pairs of basic AA distributed throughout its sequence may be used as proteolytic cleavage sites.

-I-FUNCTION: Secretolytin has antibacterial activity.

-I-SUBCELDULAR LOCATION: Neuroendocrine and endocrine secretory
                                                                                                                                                                                         ö

-- DISEASE: Defects in TCOF1 are the cause of Treacher Collins syndrome (TCS) [MIW.154500]. TCS is an autosomal dominant disorder of crandofactal development that occurs with an incidence of 1/50,000 live births. The clinical features of TCS are bilaterally symmetrical and include: (1) abnormalities of the external ears, atresia of the external ear canals, and malformation of the middle ear ossicles, which may result in conductive hearing loss; (2) lateral downward sloping of palpebral fisuures, frequently with colobomas of the lower eyelids; (3) hypoplasia of the mandible and zygomatic complex; (4) cleft palate.

Zygomatic complex; (4) cleft palate.

-!- FUNCTION: Binds to the 37-bp core of the locus control region
(LCR) of the red/green visual pigment gene cluster. May regulate
the activity of the LCR and the cone opsin genes at earlier stages
of development (By similarity).
-!- SUBCELLUTAR LOCATION: Nuclear (By similarity).
-!- SUBCELLUTAR LOCATION: Nuclear (By similarity).
-!- DEVECIPIOTITY: Restricted to bipolar cells of the retina and
spinal cord.
-!- DEVELOPMENTAL STAGE: At stage 12, expressed throughout the
invaginating optic vesicles and a subset of cells in the ventral
spinal cord, presumably interneuron precursors. At stage 14, when
the optic rup forms, expression is restricted to a subset of
retinoblasts. At stage 15, expression along the ventral spinal and
hindbrain intensifies and persists beyond stage 20.
-!- SIMILARITY: Contains 1 cvC domain.
-!- SIMILARITY: Contains 1 homeobox domain.
                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.
